

# Integrated Science

## Graduation Requirements

In addition to the requirements listed below, students must satisfy:

1. the University regulations including the process of Academic Performance Evaluation (see the *Academic Regulations of the University* section of this Calendar),
2. the common regulations applying to all B.Sc. programs including those relating to Science Continuation and Breadth requirements (see the *Academic Regulations for the Bachelor of Science Degree* ),

## General Information

The Integrated Science (ISI) programs offered by the Faculty of Science provide undergraduate students an opportunity to design a program of study that blends a concentration in science with a linked area of specialization in another Faculty. The science concentration can be in any one of the following areas: physical, earth, life, or mathematical (including computer) science in association with specialty areas outside of the Faculty of Science. In this way, the student acquires a depth of understanding of a particular branch of science integrated with knowledge that will aid in the application of that understanding in a professional or employment context.

First-year students must submit their proposed course selection to the IS Director for approval before commencing second year. The progress of all students is monitored by the IS Advisor.

The honours program requires students to complete either a research project or research proposal ( INSC 4908 [1.0] or INSC 4907 [1.0])while the general program requires students to complete an independent study (INSC 3909 or INSC 3907).

## Academic Performance Evaluation for IS

The Academic Performance Evaluation for students in Integrated Science is based on the Major CGPA and the Overall CGPA. The Major CGPA is calculated over the combined credits in the Science Sequence and the Non-Science Sequence (13.0 credits for Honours, 9.0 credits for General.)
