Electrical and Computer Engineering

This section presents the requirements for programs in:
- M.A.Sc. Electrical and Computer Engineering
- M.Eng. Electrical and Computer Engineering
- M.A.Sc. Electrical and Computer Engineering with Specialization in Data Science
- M.Eng. Electrical and Computer Engineering with Specialization in Data Science
- Cooperative Master’s Degree
- Ph.D. Electrical and Computer Engineering

Program Requirements
Subject to the approval of the departmental chair, a student may take up to half of the course credits in the program in other disciplines (e.g., Mathematics, Computer Science, Physics).

Master's programs with a thesis earn the Master of Applied Science degree, while other master's programs earn the Master of Engineering degree.

M.A.Sc. Electrical and Computer Engineering (5.0 credits)
Requirements:
1. 2.5 credits in courses 
2. 2.5 credits in Thesis
Total Credits: 5.0

M.Eng. Electrical and Computer Engineering (5.0 credits)
Requirements - by Project (5.0 credits)
1. 4.5 credits in courses
2. 0.5 credit in project
Total Credits: 5.0
Requirements - by coursework:
1. 5.0 credits in courses

M.A.Sc. Electrical and Computer Engineering with Specialization in Data Science (5.0 credits)
Requirements - by Thesis (5.0 credits)
1. 0.5 credit in:
   - DATA 5000 [0.5] Data Science Seminar
2. 0.5 credit from data science elective courses:
   - SYSC 5001 [0.5] Simulation and Modeling
   - SYSC 5003 [0.5] Discrete Stochastic Models
   - SYSC 5004 [0.5] Optimization for Engineering Applications
   - SYSC 5101 [0.5] Design of High Performance Software
   - SYSC 5103 [0.5] Software Agents
   - SYSC 5104 [0.5] Methodologies For Discrete-Event Modeling And Simulation
   - SYSC 5201 [0.5] Computer Communication
   - SYSC 5207 [0.5] Distributed Systems Engineering
   - SYSC 5300 [0.5] Advanced Health Care Engineering
   - SYSC 5303 [0.5] Designing Secure Networking and Computer Systems
   - SYSC 5306 [0.5] Integrated Database Systems
   - SYSC 5308 [0.5] Analytical Performance Models of Computer Systems
3. 3.0 credits in courses
4. 0.5 credit in:
   - SYSC 5900 [0.5] Systems Engineering Project

Requirements - by coursework:
1. 2.5 credits in:

Total Credits: 5.0
in the area of data science

Total Credits

Requirements - by Coursework (5.0 credits)

1. 0.5 credit in:
- DATA 5000 [0.5] Data Science Seminar

2. 1.5 credits from data science elective courses:
- SYSC 5001 [0.5] Simulation and Modeling
- SYSC 5003 [0.5] Discrete Stochastic Models
- SYSC 5004 [0.5] Optimization for Engineering Applications
- SYSC 5101 [0.5] Design of High Performance Software
- SYSC 5103 [0.5] Software Agents
- SYSC 5104 [0.5] Methodologies For Discrete-Event Modeling And Simulation
- SYSC 5201 [0.5] Computer Communication
- SYSC 5207 [0.5] Distributed Systems Engineering
- SYSC 5300 [0.5] Advanced Health Care Engineering
- SYSC 5303 [0.5] Interactive Networked Systems and Telemedicine
- SYSC 5306 [0.5] Mobile Computing Systems
- SYSC 5401 [0.5] Adaptive and Learning Systems
- SYSC 5404 [0.5] Multimedia Compression, Scalability, and Adaptation
- SYSC 5405 [0.5] Pattern Classification and Experiment Design
- SYSC 5407 [0.5] Planning and Design of Computer Networks
- SYSC 5500 [0.5] Designing Secure Networking and Computer Systems
- SYSC 5703 [0.5] Integrated Database Systems
- SYSC 5706 [0.5] Analytical Performance Models of Computer Systems

3. 3.0 credits in courses

Total Credits

Cooperative Master's Degree (5.0 credits)

Participation in the Cooperative Master's program is subject to acceptance by a suitable sponsoring organization.

Requirements - by thesis

1. 3.0 credits in courses

2. 2.0 credits in Thesis

Total Credits

Requirements - by project

1. 4.0 credits in courses

2. 1.0 credit in two 0.5-credit projects (Each project conducted in one of two work terms)

Total Credits

Ph.D. Electrical and Computer Engineering (10.0 credits)

Subject to the approval of the advisory committee, a student may take up to half of the course credits in the program in other disciplines (e.g., Mathematics, Computer Science, Physics).

Requirements:

1. 1.5 credits in courses

2. A comprehensive examination involving written and oral examinations and a written thesis proposal, to take place before the end of the fourth term of registration

3. 8.5 credits in a thesis which must be defended at an oral examination

Total Credits

Graduate Courses

In all programs, the student may choose graduate courses from either university with the approval of the adviser or advisory committee. Course descriptions may be found in the departmental section of the calendar. All courses are of one term duration. Only a selection of courses listed is given in a particular academic year. The following codes identify the department offering the course.

Carleton University
- ELEC Department of Electronics
- SYSC Department of Systems and Computer Engineering

University of Ottawa
- EACJ School Electrical Engineering and Computer Science

Course List by Research Area

BIOMEDICAL ENGINEERING

Systems and Computer Engineering (Carleton)
- SYSC 5300 (ELG 6130) Advanced Health Care Engineering
- SYSC 5301 (ELG 6131) Advanced Topics in Biomedical Engineering
- SYSC 5302 (ELG 6321) Biomedical Instrumentation
- SYSC 5303 (ELG 6133) Interactive Networked Systems and Telemedicine
- SYSC 5304 (ELG 5127) Medical Image Processing
- SYSC 5307 (ELG 6307) Biological Signals

School of Engineering and Computer Science (Ottawa)
- EACJ 5303 (ELG 5123) Health Care Engineering

COMPUTER AISDES DESIGN FOR ELECTRONIC CIRCUITS

Department of Electronics (Carleton)
- ELEC 5401 (ELG 6341) Signal Integrity in High-Speed Designs: Modeling and Analysis
- ELEC 5402 (ELG 6342) Introduction to Electronic Design Automation Algorithms and Techniques
- ELEC 5404 (ELG 6344) Neural Networks for High-Speed/High-Frequency Circuit Design
- ELEC 5405 (ELG 6340) Advanced Linear and Nonlinear Circuit Theory and Applications
- ELEC 5504 (ELG 6354) Analysis of High-Speed Electronic Packages and Interconnects
- ELEC 5506 (ELG 6356) Simulation and Optimization of Electronic Circuits
- ELEC 5508 (ELG 6358) Computer Methods for Analysis and Design of VLSI Circuits
**ELEC 5704 (ELG 6374)**  
Advanced Topics in CAD

**ELEC 5803 (ELG 6383)**  
Behavioural Synthesis of ICs

**School of Engineering and Computer Science (Ottawa)**

**ELEC 5705 (ELG 5195)**  
Digital Logic Design

**COMPUTER AND SOFTWARE ENGINEERING**

**Systems and Computer Engineering (Carleton)**

**SYSC 5003 (ELG 6103)**  
Discrete Stochastic Models

**SYSC 5005 (ELG 6105)**  
Optimization Theory and Methods

**SYSC 5006 (ELG 6106)**  
Design of Real-Time and Distributed Systems

**SYSC 5409**  
Interactive Media and Digital Art

**SYSC 5101 (ELG 6111)**  
Design of High Performance Software

**SYSC 5102 (ELG 6112)**  
Performance Measurement and Modeling of Distributed Applications

**SYSC 5103 (ELG 6113)**  
Software Agents

**SYSC 5104 (ELG 6114)**  
Methodologies For Discrete-Event Modeling And Simulation

**SYSC 5105 (ELG 6115)**  
Software Quality Engineering and Management

**SYSC 5108 (ELG 6118)**  
Topics in Information Systems

**SYSC 5508 (ELG 6158)**  
Digital Systems Architecture

**SYSC 5701 (CSI 5117)**  
Operating System Methods for Real-Time Applications

**SYSC 5703 (ELG 6173)**  
Integrated Database Systems

**SYSC 5704 (ELG 6174)**  
Elements of Computer Systems

**SYSC 5706 (ELG 6176)**  
Analytical Performance Models of Computer Systems

**SYSC 5708 (ELG 6178)**  
Model-Driven Development of Real-Time and Distributed Software

**SYSC 5709 (ELG 6179)**  
Advanced Topics in Software Engineering

**SYSC 5806 (ELG 6186)**  
Object Oriented Design of Real-Time and Distributed Systems

**SYSC 5807 (ELG 6187)**  
Advanced Topics in Computer Systems

**School of Engineering and Computer Science (Ottawa)**

**EACJ 5102 (ELG 5197)**  
Intro to Embedded Systems

**EACJ 5100 (ELG 5200)**  
Machine Vision

**EACJ 5203 (ELG 5191)**  
Distributed System Software

**EACJ 5204 (ELG 5124)**  
Virtual Environments

**EACJ 5205 (ELG 5125)**  
Quality Service Mgmt/Multimed

**EACJ 5703 (ELG 5194)**  
Reliable Digital Systems

**EACJ 5705 (ELG 5195)**  
Digital Logic Design

**EACJ 5807 (ELG 7186)**  
Topics in Computers I

**EACJ 5808 (ELG 7187)**  
Topics in Computers II

**EACJ 5900 (ELG 7573)**  
Sujets choisis sur les ordinateurs

**COMPUTER COMMUNICATIONS, DISTRIBUTED SYSTEMS, AND MULTIMEDIA**

**Systems and Computer Engineering (Carleton)**

**SYSC 5109 (ELG 6119)**  
Teletraffic Engineering

**SYSC 5201 (ELG 6121)**  
Computer Communication

**SYSC 5207 (ELG 6127)**  
Distributed Systems Engineering

**SYSC 5306 (ELG 6136)**  
Mobile Computing Systems

**SYSC 5403 (ELG 6143)**  
Network Access Techniques

**SYSC 5406**  
Network Routing Technologies

**SYSC 5407**  
Planning and Design of Computer Networks

**SYSC 5408**  
Cross Layer Design for Wireless Networks

**SYSC 5500**  
Designing Secure Networking and Computer Systems

**SYSC 5502 (ELG 6152)**  
Advanced Linear Systems

**SYSC 5800 (ELG 6180)**  
Network Computing

**SYSC 5801 (ELG 6181)**  
Advanced Topics in Computer Communications

**SYSC 5808 (ELG 6188)**  
Communications Network Management

**School of Engineering and Computer Science (Ottawa)**

**EACJ 5009 (ELG 5383)**  
Survivable Optical Networks

**EACJ 5104 (ELG 5199)**  
Distributed Database Systems

**EACJ 5108 (ELG 5382)**  
Switching and Traffic Theory

**EACJ 5200 (ELG 5120)**  
Queueing Systems

**EACJ 5202 (ELG 5122)**  
Analysis/Perf Eval: Comp Comm

**EACJ 5206 (ELG 5126)**  
Source Coding and Data Compress.

**EACJ 5208 (ELG 7185)**  
Wireless Ad Hoc Networking

**EACJ 5500 (ELG 5371)**  
Digital Comm by Satellite

**EACJ 5605 (ELG 7177)**  
Topics in Communications I

**EACJ 5606 (ELG 7178)**  
Topics in Communications II

**EACJ 5607 (ELG 5374)**  
Computer-Communication Network

**EACJ 5369 (ELG 5396)**  
Internetworking Technologies

Students in their third-year of study in the B.Eng. degree should consult with both the Undergraduate Chair and the Graduate Chair to determine if the accelerated pathway is appropriate for them and to confirm their selection of courses for their final year of undergraduate studies.

**Accelerated Pathway Requirements**

1. At least 0.5 credit in ELEC or SYSC courses, or other approved courses, at the 5000-level with a grade of B+ or higher.
2. Minimum overall CGPA of A-.

Students may receive advanced standing with transfer of credit of up to 1.0 credit which can reduce their time to completion.

**Admission**

The normal requirement for admission into the Ph.D. program is a master's degree with thesis in electrical engineering or a related discipline.

**Regulations**

See the General Regulations section of this Calendar.

**Electrical Engineering - Joint (EACJ) Courses**

</tr>
</tbody>
</table>

**Admission**

The normal requirement for admission to a master's program is a bachelor's degree in electrical engineering or a related discipline with a CGPA of B+.

**Accelerated Pathway**

The accelerated pathway in the M.A.Sc. and M.Eng. Electrical and Computer Engineering program is a flexible and individualized plan of graduate study for students in their final year of a Carleton B.Eng degree. Students with demonstrated academic excellence and aptitude for research may qualify for this option.

Signal Proc: Intr Convex Optim

Electronics (ELEC) Courses

Note: The Departments of Electronics and Systems and Computer Engineering offer courses in: Biomedical and Electrical Engineering, Communications Engineering, Computer Systems Engineering, Electrical Engineering, Software Engineering and Engineering Physics.

ELEC 5200 [0.5 credit] (ELG 6320)  
Advanced Topics in Integrated Circuits and Devices  
Topics vary from year to year.

ELEC 5301 [0.5 credit]  
Silicon Photonics  
Fundamentals of silicon photonics, advanced electromagnetic theory, guided wave optics, interferometry, silicon-on- insulator (SOI) photonics, silicon based waveguide devices (planar, rib, strip), fabrication of photonic devices, passive and active silicon photonic devices such as modulators, lasers, detectors, silicon opto-electronic integration.

ELEC 5302 [0.5 credit]  
Renewable and Distributed Energy Resource Technologies  
Topics covered include renewable energy resources, photovoltaic systems, wind generation systems, energy storage units, electric vehicles, grid integration, distributed generation, microgrid, active distribution network, modeling and analysis of power system components, state-of-the-art power system simulation tools.

ELEC 5401 [0.5 credit] (ELG 6341)  
Signal Integrity in High-Speed Designs: Modeling and Analysis  
Crosstalk, distortion, ground bounce, skin effect. Interconnect modeling/simulation, packages, ground/power planes, Elmore delay, lossy-coupled, frequency-dependent transmission lines, telegraphers equations, extraction, measured parameters, macromodeling; passivity/causality, MoC/MRA, vector fit, model reduction, electromagnetic compatibility/interference, mixed-domain systems, concurrent analysis.  
Precludes additional credit for ELEC 5704 (ELG 6374).  
Prerequisite(s): permission of the Department.

ELEC 5402 [0.5 credit] (ELG 6342)  
Introduction to Electronic Design Automation Algorithms and Techniques  
Digital design process; overview of design automation tools/methodologies; theory of computational complexity; layout compaction; placement and partitioning; floorplanning; routing; digital simulation; switch-level simulation; logic synthesis; verification; analog and RF simulation.  
Precludes additional credit for ELEC 5704 Section "Y" (ELG 6374 Section "Y").

ELEC 5404 [0.5 credit] (ELG 6344)  
Neural Networks for High-Speed/High-Frequency Circuit Design  
Introduction to neural network methodologies for computer-aided design of high-speed/high-frequency circuits, including modeling of passive and active devices/circuits, and their applications in high-level design and optimization in wired and wireless electronic systems.
ELEC 5405 [0.5 credit] (ELG 6340)  
Advanced Linear and Nonlinear Circuit Theory and Applications  
Graph theory, incidence matrices, cutset matrices, generalized KCL, topological formulation, state-space equations, Tellegen’s theorem, state-transition matrix, multi-port representation, stability, passivity, causality, synthesis of passive circuits, active networks, nonlinear dynamic circuits.

ELEC 5409 [0.5 credit] (ELG 6349)  
Microwave and Millimeterwave Integrated Circuits  

ELEC 5501 [0.5 credit] (ELG 6351)  
Passive Microwave Circuits  

ELEC 5502 [0.5 credit] (ELG 6352)  
Analog Integrated Filters  
The fundamentals and details of analog continuous-time and SAW filters. Comparison to switched-capacitor filters. Review of filter concepts, types of filters, approximations, transformations. Building blocks such as op amps, transconductance amplifiers, and gyrators. Design using cascaded second-order sections, multiple loop feedback and LC ladder simulations.

ELEC 5503 [0.5 credit] (ELG 6353)  
Radio Frequency Integrated Circuit Design  

ELEC 5504 [0.5 credit] (ELG 6354)  
Analysis of High-Speed Electronic Packages and Interconnects  
Introduction to modeling, simulation and optimization of high-speed VLSI packages; models for packages, interconnects and ground/power planes; lumped, distributed and EM models for interconnects; delay, crosstalk and switching noise; moment matching techniques; concurrent thermal/electrical analysis of IC packages and boards.

ELEC 5506 [0.5 credit] (ELG 6356)  
Simulation and Optimization of Electronic Circuits  
Introduction to computer simulation and optimization of electrical circuits. Time- and frequency-domain formulations for sensitivity analysis and optimization. Optimization techniques for performance-, cost- and yield-driven design of electronic circuits. Optimization approaches to modeling and parameter extraction of active and passive elements.

ELEC 5508 [0.5 credit] (ELG 6358)  
Computer Methods for Analysis and Design of VLSI Circuits  

ELEC 5509 [0.5 credit] (ELG 6359)  
Integrated Circuit Technology  
Survey of technology used in silicon VLSI integrated circuit fabrication. Crystal growth and crystal defects, oxidation, diffusion, ion implantation and annealing, gettering, CVD, etching, materials for metallization and contacting, and photolithography. Structures and fabrication techniques required for submicron MOSFETs. Applications in advanced CMOS processes.

ELEC 5600 [0.5 credit] (ELG 6360)  
Digital Integrated Circuit Testing  
Production testing of digital integrated circuits. Outline of methods of testing used in production. Testing schemes and design for testability. Faults and fault models, yield estimates, testability measures, fault simulation, test generation methods, sequential testing, scan design, boundary scan, built-in self test, CMOS testing.

ELEC 5602 [0.5 credit] (ELG 6362)  
Microwave Semiconductor Devices and Applications  
Theory of operation for microwave diodes (varactor, p-i-n, Gunn, IMPATT) and transistors (BJT, MESFET, HBT, HEMT). Small-signal, large-signal, and noise models for CAD. Diode oscillators and reflection amplifiers. Design of transistor oscillators and amplifiers. Discussion of technology/fabrication issues and MMIC applications.

ELEC 5604 [0.5 credit] (ELG 6364)  
Radar Systems  
Fundamentals; range equation, minimum detectable signal, radar cross-section, pulse repetition frequency, range ambiguities. Radar classes: CW, FM-CW, MTI, tracking, air surveillance, SSR, PAR, MLS, SAR, SLAR, OTH, 3D and bistatic radars. Radar subsystems; transmitters, antennas, receivers, processors, displays, detection criteria; CFAR receivers, noise, clutter precipitation.
ELEC 5605 [0.5 credit] (ELG 6365)
Optical Fibre Communications
Transmission characteristics of and design considerations for multi-mode and single-mode optical fibre waveguides; materials, structures, and device properties of laser light sources; properties and performance of p-i-n and avalanche photodiodes; types of optical fibre signal formats, preamplifier topologies, noise, receiver sensitivity, transmitter design, link design.

ELEC 5606 [0.5 credit] (ELG 6366)
Phase-Locked Loops and Receiver Synchronizers
Phase-locked loops; components, fundamentals, stability, transient response, sinusoidal operation, noise performance, tracking, acquisition and optimization. Receiver synchronizers: carrier synchronizers including squaring loop, Costas loop, and remodulator for BPSK, QPSK BER performance; clock synchronizers including early-late gate, in-phase/midphase, and delay line multiplier.

ELEC 5607 [0.5 credit] (ELG 6367)
Fundamentals of Antenna Engineering
Basic properties of antennas (gain, radiation patterns, polarization, antenna temperature). Analysis of common antennas (dipoles, loops, helices, aperture antennas, microstrip, dielectric resonator antennas, reflectors). Analysis and design of linear and planar arrays (array factors, beam scanning, amplitude weighting, feed networks).

ELEC 5608 [0.5 credit] (ELG 6368)
Fourier Optics
The theory and applications of diffractive and non-diffractive coherent optics, with emphasis on holograms, tomography and high-speed optical computing. Mathematical basis: generalized 2-D Fourier transforms, transfer function of an optical system, 2-D sampling theory, Helmholtz equation, Green's theorem, and the classical diffraction theories.

ELEC 5609 [0.5 credit] (ELG 6369)
Nonlinear Microwave Devices and Effects
The physical basis and mathematical modeling of a variety of microwave/millimeter-wave devices, (some of which exhibit the most extreme nonlinear behaviour known), how they can be exploited in practical circuits and systems, and how the resulting device/circuit interactions can be analyzed.

ELEC 5701 [0.5 credit] (ELG 6371)
Fibre and Waveguide Components for Communications and Sensors
Optical wave propagation in dielectric waveguides. Theory and practice for passive photonic devices used for routing, filtering, and signal processing, including structural and biochemical sensors. Directional couplers and splitters, filters (gratings and etalons), Mach-Zehnder interferometers, Arrayed waveguide gratings, and dispersion compensators. Precludes additional credit for ELEC 5709W (ELG 6379W). Prerequisite(s): ELEC 3909 or equivalent.

ELEC 5702 [0.5 credit] (ELG 6372)
Principles of Photonics
Electromagnetic wave propagation in crystals; review of geometric optics; Gaussian beam propagation; optical fibres; dielectric waveguides for optical integrated circuits; optical resonators; optical properties of materials; theory of laser oscillation; specific laser systems; electro-optic modulators; photorefractive materials and applications; holography; optical interconnects.

ELEC 5703 [0.5 credit] (ELG 6373)
Advanced Topics in Solid State Devices and IC Technology
Recent and advanced topics in semiconductor device physics, modeling, and integrated circuit fabrication technology. Topic varies from year to year according to departmental research interests. Students may be expected to contribute lectures or seminars on selected topics.

ELEC 5704 [0.5 credit] (ELG 6374)
Advanced Topics in CAD
Recent and advanced topics in computer-aided techniques for the design of VLSI and telecommunications circuits. Topics will vary from year to year according to the departmental research interests. Students may be expected to contribute lectures or seminars on selected topics.

ELEC 5705 [0.5 credit] (ELG 6375)
Advanced Topics in VLSI
Recent and advanced topics in the design of very large scale integrated circuits, with emphasis on mixed analog/digital circuits for telecommunications applications. Topic varies from year to year according to departmental research interests. Students may be expected to contribute lectures or seminars on selected topics.

ELEC 5706 [0.5 credit] (ELG 6376)
Submicron CMOS and BiCMOS Circuits for Sampled Data Applications
The analog aspects of digital CMOS and BiCMOS circuit design in submicron technologies including reliability; sampled analog circuits, including amplifier non-ideal characteristics and switch charge injection; CMOS/BiCMOS amplifier design considerations, leading up to standard folded-cascode and two-stage circuits.
ELEC 5707 [0.5 credit] (ELG 6377)
Microsensors and MEMS
Physical design of microelectromechanical systems (MEMS) and microfabricated sensors and actuators. An overview of thin and thick film processes and micromachining techniques will provide fabrication background. Device design including piezoresistive, piezoelectric, electromagnetic, thermal, optical, and chemical sensors and actuators.

ELEC 5708 [0.5 credit] (ELG 6378)
ASICs in Telecommunications
Introduction to modern ASIC technologies for Telecom. Review of circuit-level building blocks for typical wireline and wireless applications, including power/performance tradeoffs. Corresponding FPGA analog and digital IO circuits are discussed. A topical literature study and circuit level design exercises.

ELEC 5709 [0.5 credit] (ELG 6379)
Advanced Topics in Electromagnetics
Recent and advanced topics in electro-magnetics, antennas, radar systems, microwave devices and circuits, or optoelectronics. The subject material will vary from year to year according to research interests in the department and/or expertise provided by visiting scholars or sessional lecturers.

ELEC 5800 [0.5 credit] (ELG 6380)
Theory of Semiconductor Devices

ELEC 5801 [0.5 credit] (ELG 6381)
High-Speed and Low-Power VLSI
High-Speed and Low-Power CMOS VLSI circuit techniques. Low and high levels of abstraction; transistor, switch, logic-gate, module, system levels. State-of-the-art techniques to optimize the performance and energy consumption of a circuit. One or more of these techniques are used in a design project. Prerequisite(s): ELEC 4708 or ELEC 5804 or the equivalent or permission of the instructor.

ELEC 5802 [0.5 credit] (ELG 6382)
Surface-Controlled Semiconductor Devices
Fundamentals of the MOS system; MOS capacitors. Long channel behaviour: theory, limitations and performance of the SPICE level 1 and 2 models. Small geometry effects. Subthreshold operation and modeling. Hot electron effects and reliability.

ELEC 5803 [0.5 credit] (ELG 6383)
Behavioural Synthesis of ICs
Various topics related to computer analysis and synthesis of VLSI circuits including: logic synthesis, finite state machine synthesis, design methodologies, design for reuse, testing, common VLSI functions, a review of Verilog. Prerequisite(s): Some IC design knowledge such as given in ELEC 4708.

ELEC 5804 [0.5 credit] (ELG 6384)
VLSI Design
An IC design course with a strong emphasis on design methodology, to be followed by ELEC 5805 (ELG 6385) in the second term. The design philosophies considered will include Full Custom design, standard cells, gate-arrays and sea-of-gates using CMOS and BiCMOS technology. State-of-the-art computer-aided design tools are used.

ELEC 5805 [0.5 credit] (ELG 6385)
VLSI Design Project
Using state-of-the-art CMOS and BiCMOS technologies, students will initiate their own design of an integrated circuit using tools in the CAD lab and submit it for fabrication where the design warrants.

ELEC 5808 [0.5 credit] (ELG 6388)
Signal Processing Electronics
CCDs, transversal filters, recursive filters, switched capacitor filters, with particular emphasis on integration of analog signal processing techniques in monolithic MOS ICs. Detailed op amp design in CMOS technology. Implications of nonideal op amp behaviour in filter performance. Basic sampled data concepts.

ELEC 5809 [0.5 credit] (ELG 6389)
Nonlinear Electronic Circuits
Introduction to non-linear circuits used in today's telecommunications ICs; CMOS non-linear circuits such as direct-RF-sampling mixers, phase-detectors; digital loop-filters, DCOs, frequency synthesizers and clock-and-data-recovery are introduced. Modeling of these non-linear circuits and existing options for simulations and closed form circuit analysis is presented. Prerequisites: additional credit for ELEC 5705 (ELG 6375) in the second term. Prerequisite(s): permission of the Department.

ELEC 5900 [0.5 credit] (ELG 6389)
Engineering Project I
A one-term course, carrying 0.5 credit, for students pursuing the course work M.Eng. program. An engineering study, analysis and/or design project under the supervision of a faculty member. Written and oral reports are required. This course may be repeated for credit.
ELEC 5901 [1.0 credit] (ELG 6389)
Engineering Project II
A one-term course, carrying full-course credit, for students pursuing the course work or co-op M.Eng. program. An engineering study, analysis and/or design project under the supervision of a faculty member. Written and oral reports are required. This course may be repeated for credit.

ELEC 5906 [0.5 credit] (ELG 6389)
Directed Studies
Various possibilities exist for pursuing directed studies on topics approved by a course supervisor, including the above listed course topics where they are not offered on a formal basis.

ELEC 5909 [2.5 credits]
M.A.Sc. Thesis

ELEC 6909 [8.5 credits]
Ph.D. Thesis

Systems and Computer Engineering (SYSC) Courses

SYSC 5001 [0.5 credit] (ELG 6101)
Simulation and Modeling

SYSC 5003 [0.5 credit] (ELG 6103)
Discrete Stochastic Models

SYSC 5004 [0.5 credit] (ELG 6104)
Optimization for Engineering Applications
Introduction to algorithms and computer methods for optimizing complex engineering systems. Includes linear programming, networks, nonlinear programming, integer and mixed-integer programming, genetic algorithms and search methods, and dynamic programming. Emphasizes practical algorithms and computer methods for engineering applications.

SYSC 5005 [0.5 credit] (ELG 6105)
Optimization Theory and Methods
Advanced theory, algorithms and computer methods for optimization. Interior point methods for linear optimization, advanced methods for nonlinear and mixed-integer optimization. Search methods. Applications in engineering. Prerequisite(s): SYSC 5004 (ELG 6104) or equivalent.

SYSC 5006 [0.5 credit] (ELG 6106)
Design of Real-Time and Distributed Systems
Characteristics of real-time and distributed systems. Modern midware systems, such as CORBA, DCE, RMI for building distributed applications: advantages and disadvantages. Analyzing designs for robustness, modularity, extensibility, portability and performance. Implementation issues. Major course project. Prerequisite(s): SYSC 3303 and SYSC 5708 (ELG 6178) or similar experience.

SYSC 5007 [0.5 credit] (ELG 6107)
Expert Systems
Survey of some landmark expert systems; types of architecture and knowledge representation; interferring techniques; approximate reasoning; truth maintenance; explanation facilities; knowledge acquisition. A project to implement a small expert system will be assigned. Also listed as COMP 5007. Prerequisite(s): COMP 4007 or COMP 5001 (CSI 5113) or permission of the Department.

SYSC 5101 [0.5 credit] (ELG 6111)
Design of High Performance Software
Designing software to demanding performance specifications. Design analysis using models of computation, workload, and performance. Principles to govern design improvement for sequential, concurrent and parallel execution, based on resource architecture and quantitative analysis. Prerequisite(s): SYSC 5704 (ELG 6174) and a course in software engineering, or equivalent.

SYSC 5102 [0.5 credit] (ELG 6112)
Performance Measurement and Modeling of Distributed Applications
Performance measurements, metrics and models of midware based systems and applications. Benchmarks, workload characterization, and methods for capacity planning and system sizing. Performance monitoring infrastructures for operating systems and applications. Introduction to the design and analysis of experiments and the interpretation of measurements. Prerequisite(s): SYSC 5101 (ELG 6611) or equivalent.

SYSC 5103 [0.5 credit] (ELG 6113)
Software Agents
Agent-based programming; elements of Distributed Artificial Intelligence; beliefs, desires and intentions; component-based technology; languages for agent implementations; interface agents; information sharing and coordination; KIF; collaboration; communication; ontologies; KQML; autonomy; adaptability; security issues; mobility; standards; agent design issues and frameworks, applications in telecommunications. Prerequisite(s): Knowledge of Java, C/C++ or Smalltalk.
SYSC 5104 [0.5 credit] (ELG 6114)
Methodologies For Discrete-Event Modeling And Simulation
Prerequisite(s): knowledge of C++ and of basic concepts of concurrency and distributed systems.

SYSC 5105 [0.5 credit] (ELG 6115)
Software Quality Engineering and Management
All aspects of software quality engineering. Software testing, at all stages of the software development and maintenance life cycle. Software reviews and inspections. Use of software measurement and quantitative modeling for the purpose of software quality control and improvement.
Prerequisite(s): an undergraduate course in software engineering such as SYSC 4800 or SEG 3300, or equivalent, and basic statistics.

SYSC 5108 [0.5 credit] (ELG 6118)
Topics in Information Systems
Recent and advanced topics in the field of Information Systems and its related areas.

SYSC 5109 [0.5 credit] (ELG 6119)
Teletraffic Engineering
Congestion phenomena in telephone systems, and related telecommunications networks and systems, with an emphasis on the problems, notation, terminology, and typical switching systems and networks of the operating telephone companies. Analytical queuing models and applications to these systems.
Prerequisite(s): SYSC 5503 (ELG 5503) or ELG 5119 (EACJ 5109) or equivalent.

SYSC 5200 [0.5 credit] (ELG 6120)
Algebraic Coding Theory
Review of Algebra, Finite Fields, Linear Block Codes and their Properties, Hamming Codes, Cyclic Codes, Hadamard Matrices and Hadamard Codes, Golay Codes, Reed-Muller Codes, BCH and Reed-Solomon Codes, Decoding Algorithms, Coding Bounds.
Prerequisites additional credit for SYSC 5507 (ELG 6157).

SYSC 5201 [0.5 credit] (ELG 6121)
Computer Communication
Computer network types, introductory queuing theory and performance analysis. OSI layering and BISDN layering modifications. Data link layer. Local area networks and random access (CSMA- CD, switched ethernet, token ring, wireless LAN). Public Networks. IP networks, addressing, routing. Transport layer, flow control. Introduction to ISDN. Precludes additional credit for EACJ 5607 (ELG 5374) or SYSC 4602 (ELG 4181).
Prerequisite(s): Undergraduate preparation in probability theory equivalent to STAT 3502.

SYSC 5207 [0.5 credit] (ELG 6127)
Distributed Systems Engineering
Prerequisite(s): permission of the Department.

SYSC 5300 [0.5 credit] (ELG 6130)
Advanced Health Care Engineering
Healthcare and technology; overview of medical devices and sensors; safe and effective use and management of technology; telemedicine; medical databases, data collection, storage, retrieval and computers in medicine; electronic patient records, PACS; clinical decision-support systems.
Also listed as BIOM 5401 (BMG 5318).
Prerequisites additional credit for EACJ 5303 (ELG 5123).
Prerequisite(s): permission of the instructor.

SYSC 5301 [0.5 credit] (ELG 6131)
Advanced Topics in Biomedical Engineering
Topics vary from year to year.
Also listed as EACJ 5127 (ELG 6131).
Prerequisite(s): permission of the Department.

SYSC 5302 [0.5 credit] (ELG 6321)
Biomedical Instrumentation
Instrumentation designed to measure physiological variables related to the function of the heart, lungs, kidney, nervous and musculo-skeletal system; emergency, critical care, surgery and anaesthesia equipment.
Also listed as EACJ 5302 (ELG 6321).
Prerequisites additional credit for BIOM 5100 (BMG 5103).
Prerequisite(s): permission of the instructor.
SYSC 5303 [0.5 credit] (ELG 6133)  
Interactive Networked Systems and Telemedicine  
Telemanipulator; human motoring and sensory capabilities; typical interface devices; mathematical model of haptic interfaces; haptic rendering; stability and transparency; remote control schemes; time delay compensation; networking and realtime protocols, history and challenges of telemedicine; telemedicine applications: telesurgery, telemonitoring, telediagnosis and telehomecare.  
Also listed as BIOM 5402 (BMG 5402).  
Prerequisite(s): permission of the Department.

SYSC 5304 [0.5 credit] (ELG 5127)  
Medical Image Processing  
Mathematical models of image formation based on the image modality and tissue properties. Linear models of image degradation and reconstruction. Inverse problems and regularization for image reconstruction. Image formation in radiology, computed tomography, magnetic resonance imaging, nuclear medicine, ultrasound, positron emission tomography, electrical impedance tomography.  
Also listed as BIOM 5200 (BMG 5105).

SYSC 5306 [0.5 credit] (ELG 6136)  
Mobile Computing Systems  
Systems to build mobile applications. Covers data link layer to application layer. Emphasis on existing wireless infrastructure and IETF protocols. Focuses on view of mobile application developer; communication systems, middleware and application frameworks, defacto standards proposed/developed by industry consortia.  
Precludes additional credit for COMP 5402 (CSI 5142).  
Prerequisite(s): EACJ 5607 (ELG 5374) or SYSC 5201 (ELG 6121) or permission of the Department.

SYSC 5307 [0.5 credit] (ELG 6307)  
Biological Signals  
Modeling of neuromuscular biological signals, including subthreshold phenomena, active behaviour of cell membranes, and innervation processes. Measurement of biological signals, including electrode effects. Time domain, frequency domain, and adaptive filtering techniques for noise reduction.  
Precludes additional credit for BIOM 5101 (BMG 5104).

SYSC 5370 [0.5 credit] (ELG 5370)  
Multiresolution Signal Decomposition: Analysis and Applications  

SYSC 5401 [0.5 credit] (ELG 6141)  
Adaptive and Learning Systems  
Prerequisite(s): SYSC 5502 (ELG 6152) or equivalent.

SYSC 5402 [0.5 credit] (ELG 6142)  
Advanced Dynamics With Applications to Robotics  

SYSC 5403 [0.5 credit] (ELG 6143)  
Network Access Techniques  
A range of access technologies with emphasis on broadband access. Physical channels and the state-of-the-art of coding, modulation, multiplexing strategies to overcome physical impairments. including high-speed transmission over twisted pair, wireless, fibre and co-axial media.  
Prerequisite(s): SYSC 5503 (ELG 6153), and SYSC 5504 (ELG 6154) or ELG 5375 (EACJ 5506).

SYSC 5404 [0.5 credit]  
Multimedia Compression, Scalability, and Adaptation  
This course covers media compression, in-depth issues of scalability in the compression domain (including audio, images, video, 2D and 3D graphics), and adaptation towards various contexts; as well is covering various popular media encoding standards (including JPEG and MPEG).

SYSC 5405 [0.5 credit] (ELG 6102)  
Pattern Classification and Experiment Design  
Introduction to a variety of supervised and unsupervised pattern classification techniques with emphasis on correct application. Statistically rigorous experimental design and reporting of performance results. Case studies will be drawn from various fields including biomedical informatics.  
Also listed as BIOM 5405 (BMG 5111).  
Prerequisite(s): undergraduate introductory probability and statistics.

SYSC 5406 [0.5 credit]  
Network Routing Technologies  
The course covers routing technologies for high-speed networks. The course addresses in-depth issues and technologies in traffic engineering, MPLS (Multiprotocol Label Switching) system components and architecture, constraint-based routing, quality of service, protection and restoration, virtual private networks, cross layer interworking, and special topics.
SYSC 5407 [0.5 credit]
Planning and Design of Computer Networks
Planning process of computer networks; needs and technical requirements; modeling of different network planning problems; exact and approximate algorithms; topological planning and expansion problems; equipment (switch, router) location problem; approximate and optimal routing algorithms; presentation of various case studies.

SYSC 5408 [0.5 credit]
Cross Layer Design for Wireless Networks
Quality of service measures at different layers. Parameter adaptation, tradeoffs, and optimization at physical, data-link, network, transport, and application layers. Examples of cross-layer design in cellular, ad hoc, sensor, local area, green, and cognitive radio networks.

SYSC 5409 [0.5 credit]
Interactive Media and Digital Art
Interactive digital technologies as new media for art and entertainment. Topics include essential features of the digital media, interactivity, computer games and gamification, interactive stories, serious games, virtual worlds and social networks, and digital art. Precludes additional credit for SYSC 5807 (ELG 6187).

SYSC 5500 [0.5 credit]
Designing Secure Networking and Computer Systems
Network security with coverage of computer security in support of networking concepts. Covers various security issues in data networks at different protocol layers. Routing security, worm attacks, and botnets. Security of new mobile networks and emerging networked paradigms such as social networks and cloud computing. Precludes additional credit for SYSC 5801 Section "X" (ELG 6181).

SYSC 5502 [0.5 credit] (ELG 6152)
Advanced Linear Systems

SYSC 5503 [0.5 credit] (ELG 6153)
Stochastic Processes
Basic concepts of randomness, as applied to communications, signal processing, and queueing systems; probability theory, random variables, stochastic processes; random signals in linear systems; introduction to decision and estimation; Markov chains and elements of queuing theory. Precludes additional credit for EACJ 5109 (ELG 5119).

SYSC 5504 [0.5 credit] (ELG 6154)
Principles of Digital Communication
Elements of communication theory and information theory applied to digital communications systems. Characterization of noise and channel models. Optimum Receiver theory. Modulation and coding for reliable transmission: MPSK, MQAM, M-ary orthogonal modulation. Channel coding, trellis coded modulation. Spread spectrum and CDMA communications. Precludes additional credit for EACJ 5506 (ELG 5375). Prerequisite(s): SYSC 5503 (ELG 5503) or ELG 5119 (EACJ 5109) or equivalent (may be taken concurrently).

SYSC 5506 [0.5 credit] (ELG 6157)
Information Theory
Measure of information: entropy, relative entropy, mutual information, asymptotic equipartition property, entropy rates for stochastic processes; data compression: Huffman code, arithmetic coding; channel capacity; random coding bound, reliability function, Blahut-Arimoto algorithm, Gaussian channels, coloured Gaussian noise and 'water-filling'; rate distortion theory; network information theory. Precludes additional credit for EACJ 5501 (ELG 5170). Prerequisite(s): SYSC 5503 (ELG 6153) or EACJ 5109 (ELG 5119) or equivalent.

SYSC 5508 [0.5 credit] (ELG 6158)
Digital Systems Architecture
New architectural concepts are introduced. Discussion of programmable architectures (micro-controllers, DSPs, GP) and FPGAs. Memory interfacing. Scalable, superscalar, RISC, CISC, and VLIW concepts. Parallel structures: SIMD, MISD and MIMD. Fault tolerant systems and DSP architectures. Examples of current systems are used for discussions. Prerequisite(s): SYSC 4507 or equivalent.

SYSC 5509 [0.5 credit] (ELG 6160)
Adaptive Signal Processing
Theory and techniques of adaptive filtering, including Wiener filters, gradient and LMS methods; adaptive transversal and lattice filters; recursive and fast recursive least squares; convergence and tracking performance; implementation. Applications, such as adaptive prediction, channel equalization, echo cancellation, source coding, antenna beamforming, spectral estimation. Precludes additional credit for EACJ 5800 (ELG 5377). Prerequisite(s): SYSC 5503 (ELG 5503) or ELG 5119 (EACJ 5109) or equivalent; SYSC 5602 (ELG 6162) or ELG 5376 (EACJ 5507) or equivalent.
SYSC 5601 [0.5 credit] (ELG 6161)
Neural Signal Processing
Precludes additional credit for EACJ 5709 (ELG 5796).
Prerequisite(s): SYSC 5503 (ELG 6153) or equivalent.
May be taken concurrently with SYSC 5503 (ELG 5503).

SYSC 5602 [0.5 credit] (ELG 6162)
Digital Signal Processing
Applications.
Precludes additional credit for EACJ 5507 (ELG 5376).

SYSC 5603 [0.5 credit] (ELG 6163)
Digital Signal Processing: Microprocessors, Software and Applications
Characteristics of DSP algorithms and architectural features of current DSP chips: TMS320, DSP-56xxx, AD-21xxx and SHARC. DSP multiprocessors and fault tolerant systems. Algorithm/software/hardware architecture interaction, program activity analysis, development cycle, and design tools. Case studies: LPC, codecs, FFT, echo cancellation, Viterbi decoding.
Prerequisite(s): SYSC 5602 (ELG 6162) or ELG 5376 (EACJ 5507) or equivalent.

SYSC 5604 [0.5 credit] (ELG 6164)
Advanced Topics in Digital Signal Processing
Recent and advanced topics in the field of digital signal processing and its related areas.
Prerequisite(s): SYSC 5602 (ELG 6162) or ELG 5376 (EACJ 5507) or equivalent.

SYSC 5605 [0.5 credit] (ELG 6165)
Advanced Digital Communication
Precludes additional credit for EACJ 5704 (ELG 5780).
Prerequisite(s): SYSC 5504 (ELG 6154) or equivalent.

SYSC 5606 [0.5 credit] (ELG 6166)
Introduction to Mobile Communications
Mobile radio channel characterization: signal strength prediction techniques and statistical coverage; fading; delay spread; interference models and outage probabilities. Digital modulation and transmission system performance. Signal processing techniques: diversity and beamforming, adaptive equalization, coding. Applications to TDMA and CDMA cellular systems.
Prerequisite(s): SYSC 5503 (ELG 5503) and SYSC 5504 (ELG 5514) or equivalent.

SYSC 5607 [0.5 credit] (ELG 6167)
Source Coding and Data Compression
Discrete and continuous sources. Discrete sources: Huffman coding & run length encoding. Continuous sources: waveform construction coding; PCM, DPCM, delta modulation; speech compression by parameter extraction; predictive encoding; image coding by transformation and block quantization. Fourier and Walsh transform coding. Applications to speech, television, facsimile.
Prerequisite(s): SYSC 5503 (ELG 5503) or ELG 5119 (EACJ 5109) or equivalent.

SYSC 5608 [0.5 credit] (ELG 6168)
Wireless Communications Systems Engineering
Multi-user cellular and personal radio communication systems; frequency reuse, traffic engineering, system capacity, mobility and channel resource allocation. Multiple access principles, cellular radio systems, signalling and interworking. Security and authentication. Wireless ATM, satellite systems, mobile location, wireless LANs, wireless local loops, broadband wireless, etc.
Prerequisite(s): SYSC 5503 (ELG 5503) or ELG 5119 (EACJ 5109), and SYSC 5504 (ELG 6154) or ELG 5375 (EACJ 5506), or their equivalents. May be taken concurrently.

SYSC 5609 [0.5 credit] (ELG 6169)
Digital Television

SYSC 5700 [0.5 credit] (ELG 6170)
Spread Spectrum Systems
Prerequisite(s): SYSC 5504 (ELG 6154) or equivalent.
SYSC 5701 [0.5 credit] (CSI 5117)
Operating System Methods for Real-Time Applications
Principles and methods for operating system design with application to real-time, embedded systems. Concurrent programming: mechanisms and languages; design approaches and issues; run-time support (kernel). Methods for hard real-time applications. Methods for distributed systems. Programming assignments in a suitable programming language.
Prerequisite(s): SYSC 3303 or SYSC 5704 (ELG 6174) or equivalent courses and/or experience. Programming experience in high level and assembly languages.

SYSC 5703 [0.5 credit] (ELG 6173)
Integrated Database Systems

SYSC 5704 [0.5 credit] (ELG 6174)
Elements of Computer Systems
Concepts in basic computer architecture, assembly languages, high level languages including object orientation, compilers and operating system concepts (including concurrency mechanisms such as processes and threads and computer communication). Designed for graduate students without extensive undergraduate preparation in computer system engineering (or equivalent experience).
Prerequisite(s): programming experience with at least one high level language and permission of the Department.

SYSC 5706 [0.5 credit] (ELG 6176)
Analytical Performance Models of Computer Systems
Analytical modeling techniques for performance analysis of computing systems. Theoretical techniques covered include single and multiple class queuing network models, together with a treatment of computational techniques, approximations, and limitations. Applications include scheduling, memory management, peripheral devices, databases, multiprocessing, and distributed computing.
Prerequisite(s): SYSC 5003 (ELG 6103), SYSC 5503 (ELG 5503) or ELG 5119 (EACJ 5109), or equivalent.

SYSC 5708 [0.5 credit] (ELG 6178)
Model-Driven Development of Real-Time and Distributed Software
Advanced development of real-time and distributed systems by model-driven development that shifts the focus from coding to modeling. Different types of models. Generating code by model transformations. Design patterns for distributed/concurrent systems with examples from communication applications. Design issues for reusable software.
Prerequisite(s): knowledge of UML and operating systems concepts, and permission of the Department.

SYSC 5709 [0.5 credit] (ELG 6179)
Advanced Topics in Software Engineering
Recent and advanced topics in the field of software engineering and related areas. Primary references are recent publications in the field.
Prerequisite(s): permission of the Department.

SYSC 5800 [0.5 credit] (ELG 6180)
Network Computing
Design and Java implementation of distributed applications that use telecommunication networks as their computing platform. Basics of networking; Java networking facilities. Introduction to open distributed processing; CORBA, JavaDL, JavaRMI, CGI/HTTP, DCOM, Componentware; Enterprise JavaBeans, ActiveX. Agents: Java code mobility facilities. Security issues; Java security model.

SYSC 5801 [0.5 credit] (ELG 6181)
Advanced Topics in Computer Communications
Recent and advanced topics in computer-communication networks intended as a preparation for research. Students are expected to contribute to seminars or present lectures on selected topics.
Prerequisite(s): SYSC 5201(ELG 6121) or ELG 5374 (EACJ 5607) or equivalent and permission of the Department.

SYSC 5802 [0.5 credit] (ELG 6182)
Introduction to Information and System Science
An introduction to the process of applying computers in problem solving. Emphasis on the design and analysis of efficient computer algorithms for large, complex problems. Applications in a number of areas are presented: data manipulation, databases, computer networks, queuing systems, optimization. Also listed as MATH 5802, COMP 5802, ISYS 5802.

SYSC 5803 [0.5 credit] (ELG 6183)
Logic Programming
Review of relational databases, first order predicate calculus, semantics of first order models, deductive querying. Proof theory, unification and resolution strategies. Introduction to Prolog, and/or parallelism and Concurrent Prolog. Applications in knowledge representation and rule-based expert systems.

SYSC 5804 [0.5 credit] (ELG 6184)
Advanced Topics in Communications Systems
Recent and advanced topics in communications systems.
Prerequisite(s): permission of the Department.

SYSC 5806 [0.5 credit] (ELG 6186)
Object Oriented Design of Real-Time and Distributed Systems
Advanced course in software design dealing with design issues at a high level of abstraction. Design models: use case maps for high-level behaviour description; UML for traditional object-oriented concerns. Design patterns. Forward, reverse, and re-engineering. Substantial course project on applications chosen by students.
Prerequisite(s): permission of the Department.
SYSC 5807 [0.5 credit] (ELG 6187)
Advanced Topics in Computer Systems
Recent and advanced topics in computer systems. The course will generally focus on one or more of the following areas: specification, design, implementation, and modeling/analysis. Students may be expected to contribute to lectures or seminars on selected topics. Prerequisite(s): permission of the Department.

SYSC 5808 [0.5 credit] (ELG 6188)
Communications Network Management
Network management issues. WANs and LANs. The Internet and ISO models of network management. Network management protocols SNMP, CMIP, CMOT, etc. Events, Managed Objects and MIBs. Fault management techniques. Current diagnostic theory and its limitations. AI and Machine learning approaches. Monitoring and fault management tools. Prerequisite(s): SYSC 5201 (ELG 6121) or equivalent.

SYSC 5900 [0.5 credit] (ELG 6188)
Systems Engineering Project
Students pursuing the non-thesis M.Eng. program conduct an engineering study, analysis, and/or design project under the supervision of a faculty member.

SYSC 5901 [1.0 credit] (ELG 6188)
Systems Engineering Project
Project similar to SYSC 5900, but either of greater scope or longer duration.

SYSC 5905 [2.0 credits] (ELG 6188)
M.C.S. Thesis
Also listed as MATH 5905, COMP 5905.

SYSC 5906 [0.5 credit]
Directed Studies

SYSC 5908 [1.5 credit] (ELG 6196)
M.Sc. Thesis in Information and Systems Science
Also listed as MATH 5908, ISYS 5908, COMP 5908.

SYSC 5909 [2.5 credits]
M.A.Sc. Thesis

SYSC 6909 [8.5 credits]
Ph.D. Thesis

Summer session: some of the courses listed in this Calendar are offered during the summer. Hours and scheduling for summer session courses will differ significantly from those reported in the fall/winter Calendar. To determine the scheduling and hours for summer session classes, consult the class schedule at central.carleton.ca

Not all courses listed are offered in a given year. For an up-to-date statement of course offerings for the current session and to determine the term of offering, consult the class schedule at central.carleton.ca
